

NOVA Voice Assistant: Phone Command Guide

Purpose: Speak a command in Termux and NOVA routes it to a local handler. Known phone actions work without Groq. Groq is only used for open-ended questions or commands NOVA does not recognize.

Basic setup: Install Termux:API and run `pkg install termux-api`. Give Termux microphone permission. Install Shizuku and configure `rish` only for privileged Android settings.

Safety: Calls, SMS, shell commands, reboot, app removal, and settings changes can have real effects. Check the text NOVA recognized before using destructive actions.

Start and Help

- `help` - Show commands
- `history` - Show recent actions
- `exit` or `quit` - Stop NOVA
- `ask <question>` - Ask Groq

Phone Controls

- `wifi on / wifi off` - Wi-Fi
- `bluetooth on / bluetooth off` - Bluetooth
- `brightness 0-255` - Screen brightness
- `battery` - Battery status
- `flashlight on / flashlight off` - Torch
- `mobile data on/off` - Requires Shizuku
- `airplane mode on/off` - Requires Shizuku
- `volume 0-100` - Media volume, usually requires Shizuku
- `screen timeout <seconds>`
- `rotation lock on/off`
- `dnd on/off` - Do Not Disturb
- `screenshot`
- `tap <x> <y>` - Tap screen coordinates through Shizuku
- `lock screen`

- `reboot` - Destructive; confirmation is enabled by default

Natural phrases

- “turn on my torch”
- “turn Wi-Fi off”
- “set brightness to 50”
- “set volume to 40 percent”
- “take a screenshot”
- “tap at 500, 1000”
- “what is my battery status?”
- “turn on airplane mode”
- “turn do not disturb off”

Calls and Messages

- `call <number>`
- `answer, reject, hangup`
- `call log`
- `send sms <number> <message>`
- `read sms`
- `whatsapp <contact> | <message>`
- `telegram <user> | <message>`
- `read whatsapp / read telegram`
- `read notifications`

Natural phrases

- “call 5551234”
- “send a message to 5551234 saying hello”
- “message Sam on WhatsApp saying hi”
- “show my notifications”

Apps and Web

- `open app <package.name>`
- `install app <name>`
- `uninstall app <name>`
- `force stop <package>`
- `clear cache <package>`
- `app permissions <package>`
- `open <url>`

- `search <query>`

Natural phrases

- “open the YouTube app”
- “open example.com”
- “search for Android battery tips”

Semantic UI Control

These commands inspect the visible Android UI and act on matching text. They require Shizuku and `rish`.

- `click <visible text>`
- `click text <visible text>`
- `press <visible text>`
- `select <visible text>`
- `long press <visible text>`
- `type <text>` into the focused field
- `press key enter|escape|backspace`
- `volume up / volume down`
- `play, pause, next track, previous track`
- `go back, go home, recent apps`
- `scroll up, scroll down`
- `swipe left, swipe right`
- `open quick settings, open internet`
- `open volume, open brightness`
- `open notifications, open power menu`
- `allow, continue, confirm, approve, done, enable` - safe prompt labels only

Examples

- “click see more”
- “press the Like button”
- “hold down the message”
- “type hello world”
- “press Enter”
- “allow it”
- “continue”
- “select Settings”
- “swipe left”

- “open quick settings”
- “go back”
- “scroll down”

Approval safety: NOVA never auto-approves labels such as Delete, Uninstall, Reboot, Send, or Buy. Destructive actions still require manual confirmation.

Productivity

- `note <text>`, `read notes`
- `task <text>`
- `timer <minutes>`
- `reminder <time>|<text>`
- `reminders`
- `alarm <time>`
- `calendar add <date>|<event>`
- `calendar`
- `schedule <task>`

Natural phrases

- “make a note remember milk”
- “set a timer for 10 minutes”
- “remind me to call Sam at 6pm”
- “add a task buy milk”

Information and Media

- `weather`, `news`
- `calculate <expression>`
- `convert <value>`
- `currency <amount>`
- `translate <text>|<language>`
- `play music`
- `podcast <name>`
- `now playing`
- `lights on / lights off` - smart-home setup required

Local Tools

- `time`, `date`, `uptime`

- storage, memory
- pwd, list files [path]
- find file <name>
- find text <pattern>|<directory>
- network, ping <host>
- notify <message>
- clipboard get, clipboard set <text>
- encode url <text>, decode url <text>
- clear

Automation and Advanced

- leaving home, arriving home
- wake word <word>
- voice preference <setting>
- usage stats
- shell <command> - safety checks apply
- shizuku <Android shell command>
- git, ssh <host>

Requirements

- **Works locally:** time, date, calculations, notes, tasks, file tools, parser commands.
- **Termux:API:** SMS, calls, battery, torch, screenshots, notifications, clipboard, microphone, notifications.
- **Shizuku/rish:** mobile data, airplane mode, volume, screen timeout, rotation, DND, privileged app controls.
- **Internet:** Groq, weather, news, search, currency, translation.
- **Other apps:** WhatsApp, Telegram, music, podcasts, smart-home controls require their apps or integrations.

Generated for NOVA Voice Assistant. Never place API keys in Git. Review destructive commands before confirming them.
